

[QuickTreats](#)

QuickTreat options are a great way to quickly timestamp a variety of treatments, medications or vital signs.

Access QuickTreats by selecting the red lightning bolt on the far right of the header bar.

Select Vitals to quickly add any or all vital signs.

Enter values and select “Add Vitals.” Select “X” at the top to close without saving.

General/Meds/CPR options are configured by your administrator. Up to 20 selections are available for each QuickTreat type.

To select a treatment or medication, just click the desired option. You will see the number 1 on the tile and the item has been timestamped and added to the Flowchart. Select as many treatment/medication options as needed and select OK.
